

SAVE TIME FOR MEANINGFUL CONNECTIONS

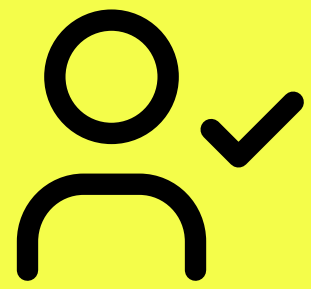

Speeding up patient intake with conversational chatbots

Hospitals today are flooded with questions from concerned citizens about their visits. They look for ways to **enable triage**, and to make sure patients receive the right **advice** depending on their visit or symptoms. On top of that, hospitals are having a hard time **assessing the amount of patients** they can expect.

They lack specific insights in regards of how many people have questions or will visit the hospital to provide the right guidance.

In response to this need, and previous global diseases, Arinti created a set of **HealthBot templates** that can easily be modified and extended to address the needs of specific hospitals. The templates, made in close collaboration with Microsoft, allow implementation of a chatbot in a matter of weeks. They make it easy to integrate the QnA maker (or even other bots) to enable a rapid extension of the available scenarios the chatbot can deal with.

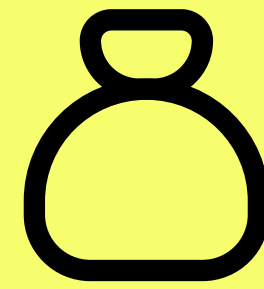

TRUE TO YOU

Easily adapted

We've tailored our health bots to the **identity** of various hospitals, making sure we adapt to the way of interaction you want to have with patients. Your **tone of voice** is taken into account, we integrate with your website or mobile platform and make sure the chatbot offers a **seamless** addition to current interactions between you and your patients.

LOW INVESTMENT

Fast track

By use of our templates, we get your bot up and running **within weeks**, keeping **costs low**. We integrate intake flows you have, link visitors to the correct websites and even offer suggestions, **without you having to lift a finger** on maintaining the content. If it's digitally available, we find it.

FAST GAINS

Get insights

Next to answering questions, the chatbot also offers intake templates, where results are automatically stored in the patients' **EPD**, safe and sound. The bot itself doesn't store any other information, to **comply with regulation**.

Trusted implementation

You might be new to this, but we aren't. **Your peers aren't either**, saving days in the intake and advise on patients and visitors. Using this approach in tens of projects each year saves time and money. We halt further implementation when value is not provided and focus on investments that **pay themselves back**, so let's build together!

Let's tailor to your needs!
